St

## Glossary

- Occupancy: Calculated by the number of occupied rooms divided by the number of available rooms that physically exist in a hotel
- Average Daily Rate (ADR): Represents the average rental income per paid occupied room in a given time period; however, ADR itself cannot be used to measure a hotel's performance
- Revenue per Available Room (RevPAR): Calculated by multiplying a hotel's ADR by its occupancy rate, an increase in RevPAR most likely indicates an improvement in occupancy rate and can be used to measure a hotel's performance
